

Sennelier introduces Tinfix Design, a newly developed line of superior quality dyes from the creators of Tinfix, the first range of professional quality ready-to-use silk dyes available to artists and designers.
Sennelier has poured over 100 years of experience into this exquisite range of colours, and through extensive research has created a state of the art line of vivid and intense dyes for fabric painting and surface design.
Tinfix Design's highly concentrated are specially designed for all types of silk and wool. Tinfix Design offers a range of 56 ready to use colours rich in vibrancy, luminosity and intensity. The Sennelier palette extends from the darkest blacks to the most delicate of hues, including a wide variety of carefully perfected pastel shades and subtle grays.
Tinfix Design offers a particularly high number of pure tones due to the development of numerous new colouring agents. These new formulations give the colours an exceptional consistency and prevent the dyes from becoming weak at the edges. Maximum concentration of colouring agent gives the dyes an extraordinary evenness for flat washes and allows for infinite gradations by diluting with water, alcohol or Tinfix dye thinner. (Due to its very high concentration, Tinfix Design should be diluted when working with wool). Fabric painted with Tinfix Design will keep its natural suppleness, softness and transparency.
Sennelier has chosen new dyes based on its recent chemical research that give the colours exceptionally high lightfastness and sensitivity to salt. Tinfix Design is also the first line to indicate each colour's performance in this regard. These measured characteristics will enlighten your colour selection and allow you to create works of assured longevity.
Artists will judge the advances Sennelier has achieved by the depth and vividness of this palette of 56 exceptional colours.

56 colours

The 3.5 fluid ounce bottles of Tinfix Design are made of a new environment friendly recyclable plastic.

"The new Tinfix Design dyes are fabulous. The amazing number of original colours make this line the most unique and complete palette available to fabric designers and silk painters. You will fall in love with these sensual colours, they are truly captivating. Once you start working with them you won't be able to put them down."

Lightfastness is evaluated using a "blue scale" on wool.
High levels of lightfastness :
**** : 8 to 6*
*** : 5 to 4*
low lightfastness:
** : 3 and 2*
o : 1

Reactivity to salt is evaluated on Pongee No.5, freehand with coarse salt:
tb : extremely reactive
b : high reactivity
o : low reactivity

For U.S.A. only
ACMI AP ART & CREATIVE MATERIALS INSTITUTE CERTIFIED TM
Conforms to ASTM D 4236

ACMI CL ART & CREATIVE MATERIALS INSTITUTE CERTIFIED TM
